## EXPERIMENT-1

## ADDITION:

## AIM:

To prove the program for addition using R-tool.

## PROGRAM:

```
num1=as.integer(readline(prompt = "enter the first number:"))
num2=as.integer(readline(prompt = "enter the second number:"))
num3=num1+num2
print(num3)
```

## RESULT:

Thus the basic program addition are executed successfully.

## EXPERIMENT-2

## SUBTRACTION:

## AIM:

To prove the program for subtraction using R-tool.

## PROGRAM:

```
num1=as.integer(readline(prompt = "enter the first number:"))
num2=as.integer(readline(prompt = "enter the second number:"))
num3=num1-num2
print(num3)
```

## RESULT:

Thus the basic program Subtraction are executed successfully.

## EXPERIMENT-3

## MULTIPLICATION:

## AIM:

To prove the program for multiplication using R-tool.

## PROGRAM:

```
num1=as.integer(readline(prompt = "enter the first number:"))
num2=as.integer(readline(prompt = "enter the second number:"))
num3=num1*num2
print(num3)
```

## RESULT:

Thus the basic program Multiplication are executed successfully.

## EXPERIMENT-4

## DIVISION:

## AIM:

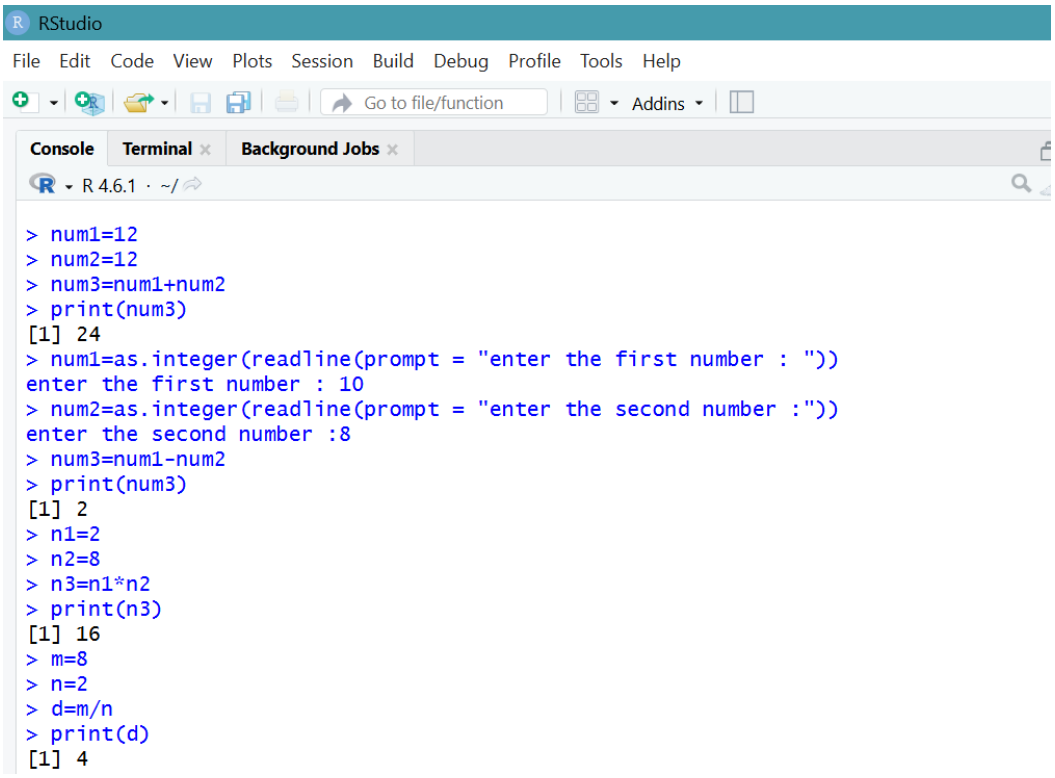

To prove the program for division using R-tool.

## PROGRAM:

```
num1=as.integer(readline(prompt = "enter the first number:"))
num2=as.integer(readline(prompt = "enter the second number:"))
num3=num1/num2
print(num3)
```

## RESULT:

Thus the basic program division are executed successfully.
